

2024 Annual Drinking Water Quality Report

For the period of January 1 to December 31, 2024
(Consumer Confidence Report)

Southwest Milam Water Supply Corporation- Public Water System I.D. # 1660015
Phone No.: (512) 446-2604

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en Español, favor de llamar al telefono 512-446-2604. Southwest Milam Water se encargará de que un traductor lo ayude.

This is your water quality report for January 1 to December 31, 2024. Southwest Milam WSC provides ground water from:

| SOURCE WATER NAME | WELL LOCATION | TYPE OF WATER | AQUIFER |
|-------------------|---------------|---------------|----------------|
| 5- ANTHIS | ROCKDALE | GROUNDWATER | CARRIZO-WILCOX |
| 6- BIRKHEAD | ROCKDALE | GROUNDWATER | CARRIZO-WILCOX |
| 7- MILANO | MILANO | GROUNDWATER | CARRIZO-WILCOX |
| 8- ROCKDALE | ROCKDALE | GROUNDWATER | CARRIZO-WILCOX |

DEFINITIONS AND ABBREVIATIONS The following tables contain scientific terms and measures, some of which may require explanation.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Avg: Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

MFL: million fibers per liter (a measure of asbestos)

mrem: millirems per year (a measure of radiation absorbed by the body)

NA: not applicable

NTU: Nephelometric Turbidity Units (a measure of turbidity)

pCi/l: picocuries per liter (a measure of radioactivity)

ppb: micrograms per liter (ug/L) or parts per billion – or one ounce in 7,350, 000 gallons of water.

ppm: milligrams per liter (mg/L) or parts per million – or one ounce in 7,350 gallons of water.

ppq: parts per quadrillion, or picograms per liter (pg/L)

ppt: parts per trillion, or nanograms per liter(ng/L)

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Information about your Drinking Water

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

Contaminants may be found in drinking water may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. **For more information on taste, odor, or color of drinking water, please contact Southwest Milam Water at (512) 446-2604.**

You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Southwest Milam Water Supply is responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Information about Source Water

TCEQ completed an assessment of your source water, and results indicate that some of our sources are susceptible to certain contaminants. The sampling requirements for your water system is based on the susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system, contact Heath Cargill, General Manager at (512) 446-2604.

| Lead and Copper | Date Sampled | MCLG | Action Level (AL) | 90 th Percentile | # Sites over AL | Units | Violation | Likely Source of Contamination |
|-----------------|--------------|------|-------------------|-----------------------------|-----------------|-------|-----------|--|
| Copper | 08/11/2023 | 1.3 | 1.3 | 0.0992 | 0 | ppm | N | Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems |
| Lead | 08/11/2023 | 0 | 15 | 0.829 | 0 | ppb | N | Corrosion of household plumbing systems; Erosion of natural deposits. |

2024 Water Quality Test Results

| Disinfection By-Products | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination |
|--------------------------|-----------------|------------------------|-----------------------------|------------------------|-----|-------|-----------|--|
| Haloacetic Acids (HAA5) | 2024 | 3 | 0-4.1 | No goal for the total. | 60 | ppb | N | By-product of drinking water disinfection. |

‘*The value in the Highest Level or Average Detected column is the highest average of all HAA5 sample results collected at a location over a year.’

| | | | | | | | | |
|------------------------------|------|---|---------|-----------------------|----|-----|---|--|
| Total Trihalomethanes (TTHM) | 2024 | 9 | 1.1-9.3 | No goal for the total | 80 | ppb | N | By-product of drinking water disinfection. |
|------------------------------|------|---|---------|-----------------------|----|-----|---|--|

‘*The value in the Highest Level or Average Detected column is the highest average of all TTHM sample results collected at a location over a year.’

| Inorganic Contaminants | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination |
|--------------------------------|-----------------|------------------------|-----------------------------|------|-----|-------|-----------|--|
| Barium | 10/12/22 | 0.146 | 0.146-0.146 | 2 | 2 | ppm | N | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits. |
| Nitrate (measured as Nitrogen) | 2024 | 1 | 0-0.6 | 10 | 10 | ppm | N | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits. |

| Radioactive Contaminants | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination |
|--------------------------|-----------------|------------------------|-----------------------------|------|-----|--------|-----------|--|
| Beta/photon emitters | 2024 | 6.8 | 6.8-6.8 | 0 | 50 | pCi/L* | N | Decay of natural and man-made deposits |

*EPA considers 50 pCi/L to be the level of concern for beta particles.

| | | | | | | | | |
|---|------|------|-----------|---|----|-------|---|------------------------------|
| Combined Radium 226/228 | 2024 | 1.65 | 1.65-1.65 | 0 | 5 | pCi/L | N | Erosion of natural deposits. |
| Gross alpha excluding radon and uranium | 2024 | 6.8 | 6.8-6.8 | 0 | 15 | pCi/L | N | Erosion of natural deposits. |

| Synthetic organic contaminants including pesticides and herbicides | Collection Date | Highest Level Detected | Range of Individual Samples | MCLG | MCL | Units | Violation | Likely Source of Contamination |
|--|-----------------|------------------------|-----------------------------|------|-----|-------|-----------|---|
| Di (2-ethylhexyl) phthalate | 2024 | 0.68 | 0-0.68 | 0 | 6 | ppb | N | Discharge from rubber and chemical factories. |

Unregulated contaminants are those that don't yet have a drinking water standard set by the US Environmental Protection Agency. The purpose of monitoring these contaminants is to help US EPA decide whether the contaminants should have a standard. Visit <https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule> for more information.

| Unregulated Contaminants | Collection Date | Average Level Detected | Range of Individual Samples | Minimum Reporting Level | Units | Likely Source of Contamination |
|--------------------------|-----------------|------------------------|-----------------------------|-------------------------|-----------------------------|--------------------------------|
| Lithium | 2023 | 14.9 | 11.2-21 | 9 | µg/L (Micrograms per Liter) | Erosion of natural deposits. |

Disinfectant Residual

| Disinfectant Residual | Year | Average Level | Range of Levels Detected | MRDL | MRDLG | Unit of Measure | Violation (Y/N) | Source in Drinking Water |
|-----------------------|------|---------------|--------------------------|------|-------|-----------------|-----------------|--|
| Chlorine (Free) | 2024 | 1.49 | 1.17-2.03 | 4 | 4 | ppm | N | Water additive used to control microbes. |

Water Loss

Each year Southwest Milam Water Supply is required to prepare and submit a water loss audit to the Texas Water Development Board, and report water loss to our customers. In 2024 Southwest Milam Water Supply produced approximately 573,817,909 gallons of water and experienced a water loss of 129,024,401 gallons of water. Southwest Milam Water Supply has adopted a Water Conservation Plan to reduce this water loss over the next five years. The water loss audit is a tool used to assess the volume of water produced compared to the volume of water sold to customers and maintain water quality. Water loss cannot be avoided, as line breaks, undetected leaks, and line flushing occur throughout the Corporation's water distribution and delivery system. Southwest Milam Water Supply Corporation strives to minimize water losses through timely responses to all water related calls for service, system maintenance, ongoing water meter replacement, and other policies as outlined in our Water Conservation Plan.

Lead Service Line Inventory

Our water system has conducted an inventory of our service lines. As of 10/24/24, our water system does not have any lead service lines. Please contact us if you have any questions regarding the lead service line inventory.
